

Configuration of Wireless LAN.

Exp No: 8b

Date :

Aim : Configuration of wireless LAN using Cisco packet

tracer

a) What is SSID of a wireless source?
SSID (Service Set Identifier) is the name of a wireless network. It is used to uniquely identify a wireless LAN.

b) What is security key?
It's a wireless router Password or encryption key used to secure a wireless network.

Result: Thus, a wireless LAN has been configured using Cisco packet tracer and the O/P is verified.
